

## Comments on the exam in Computer Architecture 3/6/2004

**Answers are found in the textbook. Comments on some of the questions:**

3. only ISA bridge
6. -6, something only 5 persons got right.
- 13 one (USB is a serial bus)
18. -128
19. only Integer comparison
22. No, because induction is only created by a varying magnetic field
26. Zero, because the head needs not move.
28. More instructions are issued per second (I also accept that more instructions are executed in parallel)
29. The program is stored in memory
31. See my homepage

### Results

31 persons from this course (plus 4 others who are not registered) sat the exam. 18 out of the 31 (=58%) scored at least the 20 points required for grade G, and 3 (=10%) at least 25 points, thus gaining one extra credit towards a higher grade for the course. The median result is 20 and the mean 17.8. A histogram of results is shown below.

Graded exams can be collected at the Kansli, Building 4.
